

Two heads are better than one

or How to use Fedora Test Days to test for you

Fedora QA

Lukáš Růžicka (lruzicka@redhat.com)

When you test alone

You know exactly how your program works.

You test the program the way it should work.

You test on a limited set of hardware.

You only have limited time for your tests.

You could miss some important problems.

When community helps you

She tries new ways to work with your software.

He always looks for flaws in other people's work.

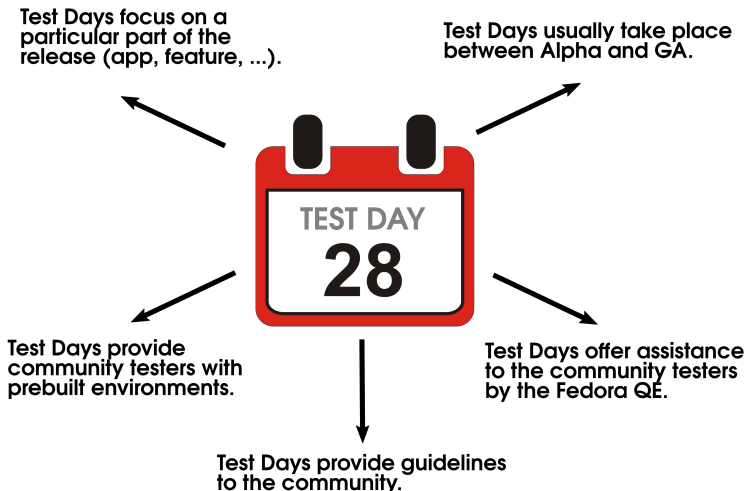

He has different expectations.

She uses a specific piece of hardware.

Together, they will catch more bugs.

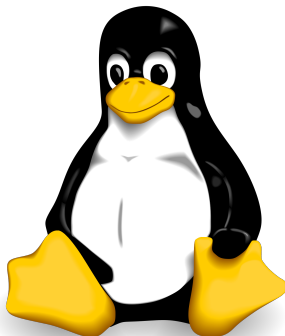

Fedora Test Days

Previously organized Test Days (Fedora 29)

SILVERBLUE

How to run your own Test Day?

Set a date.

Create WIKI pages.

Write test cases.

Set up the Test Day app.

Promote the test day.

Run the test day.

Collect the results.

Too busy to do it?

Write test cases.

Create a new issue.

pagure.io/fedora-qa/issues?status=all&tags=test+days

And let us do the rest for you.
