Two heads are better than one
or How to use Fedora Test Days to test for you

Lukáš Růžicka (lruzicka@redhat.com)

Fedora QE

When you test alone

You know how things work.

You test for certain functionality.

You test on a limited set of HW.

You test with limited time.

**You will likely miss some of the problems!**

When community helps you

Fedora Test Days

Test days are events organized by Fedora QE to get the community involved in testing.
The Fedora Days

- ▶ focus on a particular part of the release (apps, features, enhancements, bug fixing),
- ▶ take place between **Alpha** (branching out) and **GA** milestones,
- ▶ provide guidelines to community testers,
- ▶ provide online assistance from Fedora QE staff,
- ▶ and collect test results.

Previously organized Test Days (Fedora 29)

- Kernel (4.17, 4.18, 4.19)
- Fedora Media Writer
- DNF 3.5.1
- Gnome 3.30
- Silverblue
- Modularity
- more at
  http://testdays.fedorainfracloud.org/events

How to get your own Test Day

Follow the procedure at `https://fedoraproject.org/wiki/QA/SOP_Test_Day_management`. That basically means you . . .

- ▶ set a date,
- ▶ create necessary Wiki pages,
- ▶ write test cases,
- ▶ set up the Test Day App,
- ▶ promote the Test Day,
- ▶ run it,
- ▶ and collect results.

Too busy to do it?

- ► Create an issue to propose the Test Day at `https://pagure.io/fedora-qa/issues?status=all&tags=test+days`,
- ► give us some details,
- ► prepare the test cases,
- ► let us help you run the event,
- ► or let us run it for you.
